

## 1. Instalamos tomcat10

```
user@tomcat-jorge:~$ sudo apt install tomcat10
Leyendo lista de paquetes... Hecho
Creando árbol de dependencias... Hecho
Leyendo la información de estado... Hecho
Se instalarán los siguientes paquetes adicionales:
```

Podemos ver que tomcat funciona

**It works !**

If you're seeing this page via a web browser, it means you've setup Tomcat successfully. Congratulations!

This is the default Tomcat home page. It can be found on the local filesystem at: /var/lib/tomcat10/webapps/ROOT/index.html

Tomcat veterans might be pleased to learn that this system instance of Tomcat is installed with CATALINA\_HOME in /usr/share/tomcat10 and CATALINA\_BASE in /var/lib/tomcat10, following the rules from /usr/share/doc/tomcat10-common/RUNNING.txt.gz.

## 2. Despliegue de aplicaciones mediante terminal

Al tener el archivo .war en el pc original y no en la maquina virtual, lo copio haciendo un scp, lo he hecho a la carpeta del user normal y de ahí ya hago un mv a /var/lib/tomcat10/webapps

```
PS C:\Users\0jorg\Downloads> scp .\sample.war user@192.168.18.146:/home/user
user@192.168.18.146's password:
sample.war                                              100% 4606      2.
2MB/s  00:00
PS C:\Users\0jorg\Downloads>

user@tomcat-jorge:~$ pwd
/home/user
user@tomcat-jorge:~$ ls
sample.war
user@tomcat-jorge:~$ sudo mv sample.war /var/lib/tomcat10/webapps/
user@tomcat-jorge:~$ ls /var/lib/tomcat10/webapps/
ROOT  sample  sample.war
user@tomcat-jorge:~$ |
```

### 3. Comprobación

Ponemos la ip de nuestra maquina y al final /sample, si todo ha ido bien veremos lo siguiente:

The screenshot shows a web browser window with the following details:

- Address bar: 192.168.18.146:8080/sample/
- Title bar: Sample "Hello, World" Application
- Content area:
  - A small yellow cartoon cat icon.
  - ## Sample "Hello, World" Application
  - This is the home page for a sample application used to illustrate the source directory organization of a web application utilizing the principles outlined in the Application Developer's Guide.
  - To prove that they work, you can execute either of the following links:

    - To a [JSP page](#).
    - To a [servlet](#).
